Project Documentation

Project Title:

Darshan Ease App

---

1. Introduction

Temple darshan is an important religious activity for many devotees. However, due to a large number of visitors, temples often experience long queues and crowd management issues.

The **Darshan Ease system** is designed to solve this problem by providing an online platform where devotees can book their darshan slots in advance.

This project demonstrates the use of **MERN stack technologies** to build a full-stack web application.

---

2. Objectives of the project

The objectives of this project are:

- To develop an online darshan booking system
- To reduce waiting time at temples
- To provide a simple and easy booking interface
- To maintain booking records in a database
- To improve temple visitor management

---

3. Technology Used

Technology	Purpose
MongoDB	Database
Express.js	Backend framework
React.js	Frontend interface
Node.js	Server environment
CSS	Styling
Axios	API communication

---

4. System Architecture

The system architecture consists of three layers.

1. Frontend Layer

Developed using React.js.
Responsible for user interface and user interaction.

2. Backend Layer

Developed using Node.js and Express.js.
Handles server logic and API requests.

3. Database Layer

MongoDB stores all user information and booking data.

---

5. Modules of the system

User Module

Allows users to register and log in to the system.

Temple Module

Displays the list of available temples.

Example temples:

- Mahalakshmi Temple
- Jotiba Temple
- Swami Samarth Temple
- NarsobachiWadi

Booking Module

Allows users to select temple, date, and time slot for darshan.

---

6. Scope of the Project

The system provides the following features:

- User registration and login
- Temple selection
- Darshan slot booking
- Viewing booking details

The application can be expanded in the future with additional features like online payments and admin management.

---

7. Database Design

User Table / Collection

Fields:

- UserID
- Name
- Email
- Password

Booking Table / Collection

Fields:

- BookingID
- UserID
- TempleName
- Date
- TimeSlot
- NumberOfPersons

---

8. Advantages

- Easy ticket booking system
- Reduces temple crowd
- Saves time for devotees
- Simple and user-friendly interface
- Efficient data storage

---

9. Limitations

- Internet connection required
- Limited temple information
- Payment gateway not included

---

10. Future Enhancements

Future improvements may include:

- Online payment system
- Admin dashboard
- Mobile application
- Email or SMS booking confirmation
- QR code based ticket verification

---

11. Team Members

Sr No	Name	Role

1	**Ketan Kakade**	Team leader
2	**Sakshi Patil**	Team Member
3	**Sushma Patil**	Team Member
4	**Sayali Kumbhar**	Team Member
